Continuation Sh t (PTOL-303) 10/044,206

e d w

Continuation of 5. does NOT place the application in condition for allowance because: Applicant argues that the boron/flouride cannot be the sacrificail mass as claimed by the Applicant because the dopants are not "sacrificial". The Examiner disagrees, the void forming dopants exist in the gate structure only because the gate is used as a mask, the boron/fluoride is not of any use in the gate structure, its use is found within the source/drain regions. Therefore the boron/fluoride absorbed by the gate is not put to use and considered sacrificial
